

BRENT JOSHUA SAMSON

Scarborough, ON • (647) 561-4834 • samsonbrentjoshua@gmail.com • github.com/GGBrent0628

OBJECTIVE

To obtain the Junior Full Stack Developer position at Foilcon, where I can apply my full-stack development skills in Java, JavaScript, and SQL — built through hands-on academic projects — to contribute to real-world software solutions while growing alongside an experienced development team.

HIGHLIGHTS OF QUALIFICATIONS

- Full-stack web development experience building production-ready applications using Java, JavaScript, PHP, SQL, HTML, and CSS.
- Java & Spring-compatible back-end proficiency through OOP design patterns, role-based access control, and REST API implementation.
- Cloud deployment and CI/CD expertise — deployed a live ASP.NET Core application to Microsoft Azure using GitHub Actions pipelines.
- Relational database design and querying skills using MySQL, including 3NF normalization, ER modeling, and complex multi-table SQL queries.
- Software testing and quality assurance knowledge: unit testing (xUnit, PHPUnit, JUnit), defect lifecycle management, and test strategy evaluation.
- Agile and collaborative development experience across multiple team projects using Git/GitHub for version control.

TECHNICAL SKILLS

Languages: Java, JavaScript, PHP, C#, SQL, HTML, CSS

Frameworks: ASP.NET Core, Spring (familiar), JavaFX, jQuery, AJAX

Databases: MySQL, SQL Server, Supabase, PDO, ER Modeling, 3NF Normalization

Tools & Dev: Git, GitHub, GitHub Actions, Linux/Bash, MySQL Workbench, Draw.io

Concepts: OOP, MVC, REST APIs, CI/CD, Unit Testing (xUnit, PHPUnit, JUnit), Agile/Scrum, SQA, SDLC

Cloud / Deploy: Microsoft Azure, Supabase, cPanel hosting

EDUCATION

Ontario College Diploma — Computer Programming and Analysis (T177)

Expected 2027

George Brown College | Toronto, ON | Currently in Semester 4 of 6

Relevant Coursework:

- Web & Full-Stack Development, Advanced Web Programming, Object-Oriented Programming (Java)
- Database Management, System Analysis & Design, Software Quality Assurance
- Agile Software Development, Linux Essentials, DevOps, Applied Data Science, Mobile Application Development

COLLABORATIVE PROJECTS

Event Ticketing Web Application

- Deployed a full-stack event ticketing platform to Microsoft Azure using GitHub Actions CI/CD, demonstrating end-to-end ownership of the software delivery pipeline.
- Implemented ASP.NET Core Identity with role-based access control (Attendee, Organizer, Admin), live AJAX search and filtering, QR-code ticket generation, and a Chart.js analytics dashboard for organizers.
- Ensured application reliability through a suite of xUnit unit tests and Serilog structured logging for runtime monitoring.

Technologies: ASP.NET Core, C#, JavaScript, AJAX, Chart.js, SQL (Supabase), Azure, GitHub Actions, xUnit

Human Resource Management & Payroll System

- Designed and built a full desktop HRM application in Java, applying OOP principles to manage employee records (add, update, delete, view) across multiple departments.
- Developed a payroll calculation engine handling salaries, taxes, overtime, and bonuses, with Java serialization for persistent data storage and departmental report generation.

- Integrated role-based access control and a data visualization dashboard to provide management-level insights into payroll and staffing.

Technologies: *Java, JavaFX, OOP, Java Serialization, GUI Design*

EventHub SQA Audit & Improvement Plan

- Conducted a formal external audit of a software project, analyzing testing strategy, defect tracking practices, team culture, and ethical concerns to identify root causes of quality failures.
- Delivered a professional audit report with 7 prioritized, actionable recommendations and presented findings to a simulated client audience, demonstrating technical communication and analytical skills.

Technologies: *SQA principles, JUnit analysis, defect lifecycle, Agile quality processes, technical reporting*

ABC Clinic — Clinical Management System

- Co-led full SDLC analysis and design for a clinic system handling 1,500–2,000 patients per week, producing project charter, NPV/ROI feasibility analysis, and a complete testing strategy.
- Produced UML use case and class diagrams, BPMN process flows, context/Level-0 DFDs, a normalized physical data model (3NF), and UI wireframes covering all major clinic workflows.

Technologies: *UML, BPMN, Draw.io, MySQL Workbench, systems design, ER modeling*

ABC Walk-In Clinic — Database Design & SQL

- Designed a fully normalized (3NF) MySQL database schema for a walk-in clinic, producing both conceptual and physical ER models and forward-engineering the schema in MySQL Workbench with 10–15 records per table.
- Authored 10 complex SQL queries covering multi-table joins, date-range filtering, calculated salary columns, and mailing label generation — demonstrating strong data querying and manipulation skills.

Technologies: *MySQL, MySQL Workbench, SQL (DDL/DML/DQL), ER modeling, Draw.io*

INDIVIDUAL PROJECTS

PHP Voting Application with OOP & MySQL

- Built a multi-user voting application applying PHP OOP principles and PDO dependency injection for secure MySQL database integration, including user authentication, topic creation, and vote tracking with duplicate prevention.
- Deployed to a live web server with full PHPUnit test coverage, ensuring correct behavior of all class methods and database interactions.

Technologies: *PHP, MySQL, PDO, OOP, PHPUnit, HTML, CSS*

ADDITIONAL INFORMATION

Languages: English (Fluent), Filipino (Native)
